

INTRODUCING GRAZIX PORCINE – F:
The natural digestive health solution for newborn piglets.

YES, THERE IS AN ALTERNATIVE!

Grazix Porcine – F is specifically formulated to support the digestive health and maintain proper hydration levels in newborn piglets through their earliest periods of digestive stress. It is a careful blend of vitamin B1, known to alleviate the effects of stress on animal health, and reactive plant immunity (RPI) extracts, the revolutionary technology developed by LiveLeaf®, Inc.

The Grazix ingredients have been thoroughly tested and proven as a safe and effective alternative that helps maintain natural digestive balance in the gut of pigs born and raised in challenging high-density production environments.

A single administration of 2ml of this ready-to-use solution, as part of the initial care of the newborn piglet, is all it takes to give each animal the full benefit of living plant immunity!

Product name	Product Code	Bottle Contents	Bottles per Case
Grazix™ Porcine – F	ITM-134	450ml*	12

*Note: one bottle will supplement over 220 piglets.

For maximum production benefits, you can continue to protect your pigs by supplementing their drinking water with Grazix Porcine – W, designed to maintain the digestive health of weaning or weaned pigs through periods of difficult transition or increased stress.

Please contact Grazix Animal Health, Inc. at 888-510-5568 or at info@grazix.com for more details on how Grazix products work, how carefully they are manufactured and tested, and how they can help optimize your production environment.
